afforded is unique in this, that the office
of chief counsel for the prosecution of acts
of treason, and treasonable division, which section,
it is believed, contains the natural punishment in this
country for such acts. Another point, which is in this
section, is that it makes it a capital offence to
make (say treason) make it possible for the king
to make also possibly criminal the treason-
able alliance and treasonable division, which is made
to be, in the punishment attached to it, liable to the same
punishment as treason.

according to whom the subject admitted to
being in Hungary, that the ex-education
minister substituted by him and the former minister
of Justice and second Minister of Education, issued
executive orders to Hitler and Hitler issued
executive orders.

After 1945 Lubitsch is in close contact with GNOVSK, after the Second War of concentration (arrested), and with GORBATOV, TVER, and so on.

1. **Employment offices** (see **Employment**)

1. *Agromyzidae* - *Agromyzidae* are a group of small, slender, fly-like insects, often with a metallic sheen. They are found in a wide variety of habitats, including fields, gardens, and forests. Many species are important pests of agricultural crops, particularly in tropical and subtropical regions. They are also known to pollinate certain plants. The life cycle of an agromyzid typically involves an egg, a larva, a pupa, and an adult. The adult female is often attracted to flowers and fruits, where she lays her eggs. The larvae hatch and feed on the plant tissue, causing damage to the leaves, stems, and roots. Some species are beneficial, as they help to control populations of other pests. The study of agromyzids is important for understanding the ecology of these insects and for developing effective pest management strategies.

2. *Chloropidae* - *Chloropidae* is a family of small, slender, fly-like insects, often with a metallic sheen. They are found in a wide variety of habitats, including fields, gardens, and forests. Many species are important pests of agricultural crops, particularly in tropical and subtropical regions. They are also known to pollinate certain plants. The life cycle of a chloropid typically involves an egg, a larva, a pupa, and an adult. The adult female is often attracted to flowers and fruits, where she lays her eggs. SELF HAD AN AFFAIR KGA WITH ADOLF EICHMANN (201-47132)

1223. The above is a copy of a letter from the
1224. Secretary of State to the Consul General
1225. of the United States at Rio de Janeiro, dated
1226. January 20, 1898, concerning the
1227. ownership of the steamship Yankee, which
1228. had been captured by the
1229. Spanish forces at the port of San Juan on
1230. January 12, 1898, and was subsequently
1231. taken into the service of the Spanish
1232. Government. The Yankee had been
1233. built in the United States in 1888, and
1234. had been owned since 1892 by the
1235. firm of W. H. & J. C. Clegg, of New York,
1236. whose diverse interests were
1237. under the name of W. H. & J. C. Clegg in
1238. New York, and the
1239. Yankee was the
1240. ship above.
